- community/landowner relations

Module 8
FLOORHAND TRAINING
FOR WELL SERVICING
16 hrs

- general safety
- basic tool identification
- rod servicing
- tubing servicing
- rigging
- swabbing

Hands -on training available to enhance the learning process

Well Control

Well Control for Drillers
& Derrickhands

* Introductory Level Well Control
for Well Servicing

**IADC approved*

8 hrs

Topics in above class includes: gas & fluid characteristics, surface equipment, kick fundamentals, procedures and problem solving.

we offer behavior-based
leadership training

In addition to the hands-on training provided at High Plains, industry asked for a leadership program to help workers as they advance, and this type of leadership training experience has become our niche.

We develop customized programs for companies, such as le3 for Nabors Well Services, ensync for EnCana, and TOPdrive for NOMAC Drilling, each program based on their respective organization's needs.

Companies can pick and choose which elements of the program they would like to include or add their own.

Popular topics tend to be *leadership characteristics, values, communication, culture, coaching, recognition, personality types, championship team, and change.*

High Plains
Technology Center's
**Integrated Energy
Training Center**

is the official mid-continent site for hands-on oil and gas training.

The program was started in December, 2005, and since that time, over 4,200 potential workers have been trained in skills areas designed to help workers work as safely as possible in the oil and gas industry.

The training is unique in that participants use simulators and hands-on training, coupled with time in the classroom, to ensure students are trained in the most realistic environment.

The Center is committed to providing the highest quality training to strengthen the workforce for our domestic energy industry.
